Overview

You selected **(Conduct your own Data Analysis)** for your group project; your group will need to create a complete final report of your data analysis project. You will have to organize all the content according to the specifications set forth below.

Note 1: The provided report outline is just a suggestion to help you organize your report more efficiently. Please do so if your group believes there is another way to organize your report efficiently. You do not need to follow the provided outline strictly.
Note 2: No presentation is required.

Some Report Format Requirements

- The final report is evaluated on both content and presentation based on the rubrics posted in the D2L.
- The report should follow a standard research report organization. Sections and subsections are numbered by the decimal system.
  - Please type all the contents in 12-point Times Roman font (except for the titles of sections and subsections).
  - APA writing format should be applied.
  - Major sections are numbered 1, 2, 3, 4, etc.
  - Subsections within the major section are numbered 1.1, 1.2, 1.3, 1.4, etc.
  - A section or subsection gets a new number when there is a clear break from the prior section or subsection. Numbering helps the reader keep track of questions or comments on specific parts of the report.
- A cover page should also contain the report title, authors, teams # course #, instructor name, semester/year.
- Any subsidiary or supporting documents or exhibits you wish to include should be in an Appendix, with each separate document listed as Appendix A, Appendix B, Appendix C, etc.

Report Outline

The following is a suggested outline for your report:

Section	Sub-section	Title	Description / Directions
		Cover Page	Title, authors, teams # course #, instructor name, semester/year.
		Abstract	You will describe key findings, significant issues, and your key conclusions. This should be a few paragraphs summarizing your work. By reading this Abstract, readers should be able to understand the main issues, what your conclusions are, and why you came to those conclusions. Note that this Abstract should be the last section written after completing your report.
1.0		**Introduction**	You should prepare a couple of paragraphs addressing the significant issue (e.g., Research proble along with some background information on the issue. Basically, the introduction should focus on the issue, why it is significant to you, and how others would (or could) find your work useful and interesting. This section establishes the scope, context, and significance of the research being conducted by summarizing current understanding and background information about the topic, stating the purp of the work in the form of the research problem.
2.0		**Background**	If you found any prior work on this issue useful through a literature review (e.g., books, articles, news, web resources, etc.), you should introduce it in this section. This background section should be designed to provide an overview of sources your group has explored while researching a particular topic and to demonstrate to your readers how your projec fits within a larger field of study. Obviously, if there are several topics in prior research, you should use subsections to address eac them.
	Subsections 2.1 through 2.N	{You select the sub-section titles}	If necessary, you should use subsections with appropriate subsection titles.
3.0		**Methodology**	The methodology section describes the actions to be taken to investigate a research problem and rationale for applying specific procedures or techniques to identify, select, process, and analyze information applied to understanding the problem. Thus, it allows the reader to critically evaluate study's overall validity and reliability. In this section, you should answer two main questions: How was the data acquired or retrieved, a how was it analyzed?
	Subsections 3.1 through 3.N	{You select the sub-section titles}	If necessary, you should use subsections with appropriate subsection titles. Possible subsection titles could be: • 3.1 Data: General description of your data, including what it is about, how it looks like, how was acquired/retrieved • 3.2 Methodology used: How you analyzed your data, including step-by-step analysis procedu and techniques (e.g., statistical analysis and/or algorithms applied).

4.0		**Result**	Please do not just list your results. You should include the significance of your results along with t appropriate breadth and depth of discussion based on your results.
	Subsections 4.1 through 4.N	{You select the sub-section titles}	If necessary, you should use subsections with appropriate subsection titles. Possible subsection titles could be: • 4.1 Result: This should be the content reporting your findings based on the methodologies y applied for analysis. • 4.2 Discussion: Note that the purpose of the discussion is to interpret and describe the significance of your findings in light of what was already known about the research problem being investigated and to explain any new understanding or insights that emerged as a resu your study of the problem.
5.0		**Conclusion**	The conclusion is intended to help the reader understand why your research should matter to the after they have finished reading the paper. A conclusion is not merely a summary of the main top covered or a re-statement of your research problem but a synthesis of key points and, if applicab where you recommend new areas for future research.
6.0		**References**	A consolidated list of references in APA format.
7.0		**Appendices**	This is optional, according to your determination.
