As part of this course, you are required to conduct a data analysis project. This analysis requires conducting your own data analysis project & submit a research report (a template will be given to you later this semester). This project will require you to explore the complete data analysis process, from finding appropriate data sources to reporting your findings.

Your group is required to submit a proposal by the end of Week 8.

The followings are a description of the proposal:

- Briefly describe the data along with the data source.
- Research how this data can be used for your project. What is your Research Question?
- Explain the methodology that will be used for analyzing the data.
    - This may not be available for now. But try to identify & address even in brief form.

Deliverable: 1-2 page proposal document containing all the answers for the three questions mentioned above in MS Word or Adobe Acrobat pdf format.

Deadline: 11:59 PM by Week 8 (If the proposal is submitted on the due date, I may provide my feedback to each group, if necessary)

Note: you can use whatever data your group believes interesting (including US Census data, Local government data, Global climate data, Facebook ad placement, 1000 Genome project, and so on). Only when I believe your data is inappropriate for this course will I provide alternative data sources.
