Administrative Assignment: Peer Reviews for the group project.

Overview of peer reviews:

The individual grade you receive on the group project assignment will be functionally dependent upon your relative contributions to the team project as assessed by your peers. In that sense each of you is both evaluating your project teammates and being evaluated by them.

Once you submit your peer evaluation, it will be used by the instructor to scale the grade each team member receives for the project report and presentation

How peer reviews work:

Each team member will rate the contribution that each of his or her team members have made to your project so far. You will make your rating by allocating a possible score of 10 points per person to each of the other members of your team.
For example,

- If you belong to a 5 person team, you get to allocate a total 40 points (NO MORE & NO LESS) to the other 4 members of your team (YOU DO NOT RATE YOURSELF).
- If you belong to a 4-person team, you get to allocate a total of 30 points to the other 3 members of your team (disregarding yourself).
- As an illustration, let's say you belong to a five-person team: yourself, W, X, Y & Z. Let's also assume that team member W did more work than X, Y, or Z. You might choose to give W 13 points and give 9 points each to X, Y & Z. Alternatively, if you feel everyone did a more or less equal effort (please don't be that scrupulous!), just feel free to assign equal points (10) to each of your teammates - administratively this is MUCH easier on the instructor.
- Example: Let's say the project assignment grade that the team received was a 90. If a student on a four-person team received a total of 32 points from peers, then that student could receive 32/30 (106.6%) * 90 = 96 (higher score than your original group project score). Conversely, if a student on a four-person team received a total of 28 points from peers, then he or she could receive 28/30 (93.3%) * 90 = 84 (lower score than your original group project score) .

Corrections to mistakes or other problems in points allocation:

Sometimes students make a mistake and allocate either too few or too many points in total. If you make a mistake and allocate more or less than the appropriate number of total points, then your peer review is automatically reverted back to being a equal allocation of points for all team mates - i.e. it is treated as if you rated your peer's contribution equally. This may also occur at the instructor's discretion if misuse of the peer review is apparent.

Requirement for accompanying narrative justification for some reviews:

Sometimes students get a bit overzealous in assessing their peers. If you rate some of your teammates down by more than one or two points, then you must submit some accompanying narrative justification (within the message you

posted with the peer review ratings) that clearly documents and justifies this negative rating. If you do not do so, your peer review will be set aside and simply recorded as 10 points for each team mate.

Assignment deliverable:

You should prepare & submit a word, text or pdf file to the Peer Evaluation folder under Assessments --> Assignments. That file should list each of your teammates and how many points you are assigning to each one. As indicated above, if you are on a 4 person team the total points assigned must total up to 30, and if you are on a 5 person team the total points assigned must total up to 40, etc. As indicated above, if there are significant variances in the points you allocate to team members, you will be expected to alternatively justify why this is so. The instructor will use these to compile peer evaluation ratings for each student and will use that to scale the project assignment grades.
